Empirical address affinity. These groups are not asserted to be two physical NUMA nodes.
34 SMs prefer class 0; 22 prefer class 1
Fixed address rule: parity(region & 0x33)
Actual SM IDs, grouped by measured preference
Address class 0
Address class 1
Relative row/column residual (%)
0.4
0.2
0.0
−0.2
−0.4
Preference sign agrees for all 56 SMs
in every one of the six processes
Class 1 - class 0 (cycles / dependent load)
Actual SM ID
